Thanks, Ken. are you leading the discussion about the signs? It is ok for the vendor to sit in for any questions. Also, a better sign example would be on the Tex Tin site near Texas City,.. or the front gate sign at MDI. The TCEQ signs are for warnings/danger, not for a large site entrance sign. My contractor may have some examples we have used around the Region.

Donn:

In finalizing our preparations for tomorrow's Community Awareness Meeting, please see the attached revision to the "DANGER" sign intended for the SJRWP perimeter fencing. Please note this merges all three languages into a single sign to be fastened at intervals along the fencing. [I've asked for the hyphen to be removed after DANGER so as not to confuse with the other two languages. Therefore, one further revision is forthcoming this afternoon for tomorrow's discussion.]

FYI, this file has been created in a sign production program that will enable us to place the final order and meet our deadlines. If OK with you, I would like to have our sign production vendor participate in tomorrow's call. He's the specialist/professional in this arena and is best equipped to answer/ask questions from the group about the final direction and order. I'd be glad to introduce him on our call. Would including him be OK? Please advise.

As to the entrance sign we discussed, we are trying to get a digital representation of the MDI site example you referenced. If that's not available, I was planning to refer back to an earlier representation (also attached). Please confirm this as well as whether you want the versions that Crystal Taylor offered as examples (as per her note below) to also be discussed tomorrow.

Thank you and best regards.

K.

Subject: Signs - Superfund Sites

Hello Everyone:

Attached are signs generally used by the TCEQ, at (state and federal) Superfund sites. The signs are 18" x 24" in size and generally are ordered with an ultraviolet coding. The cable ties used to secure the signs are 14", ultraviolet black.

Please let me know if I may provide additional information.

Thank you,

Crystal Taylor
